

Combustion air Filter installed on ABSOLUTE series boiler models air supply.

Advantages:

- ✓ Cleaner combustion air for better combustion especially in a dusty environment.
- ✓ Prevents dirt accumulation on burner tube. Accumulation of dirt on burner tube can create hot spots because dirt does not accumulate evenly and reduce burner and cast longevity.
- ✓ Avoids a loss of power.
- ✓ Avoids restriction or clogging of the whole burner/premix and venturi.
- ✓ Easier and faster boiler maintenance.
